

Vote	Item	Discussion	JIRA	Status
29	Online help for version 5	<p>The group is disappointed in the up to date nature of it. Perhaps a downloadable PDF? The help for the program needs to be prioritized.</p> <p>There will be a task force meeting tomorrow to discuss this and the next item. This is something that is very present on that Task Force mind.</p>	MSE-52	<p>In Progress</p> <p>A refreshed User Manual is being developed and is slated for release alongside BrM 5.2.3.</p> <p>The User Manual will be update to reflect the additional modules being added to the release.</p>
29	Better documentation (User guide and Installation guide)		MSE-52	<p>In Progress</p> <p>Planned for the BrM 5.2.3 release.</p>
28	Implement Alabama customization as an option	<p>Would like to see Alabama’s customization included in the software</p> <p>I see no problem with this implementation. This can be a Tab or a Task and you can choose to include, or not include, in the software. Is anyone opposed to changing the header to being what is in Alabama?</p> <p>No opposition.</p>	MSE-53	<p>In Progress</p> <p>Planned for the BrM 5.2.3 release.</p>
25	Better QC/QA on contractor	<p>More comprehensive Alpha testing</p> <p>Bentley recognizes that this is a problem. In the more recent versions we’ve improved. Our current FDS documents are more comprehensive. We just had our annual QA Meeting and are revising the process. We have a dedicated QA person. We’re looking into automated testing. If you guys see issues, report them.</p>	MSE-54	<p>Ongoing</p> <p>Alpha Test Plans for BrM 5.2.1 have been redesigned and are currently being completed.</p>
22	Better error handling	<p>Yes. We want it to fail gracefully and provide more thorough explanations of issues. One of the security enhancements that we did to cause certain states to fail security audits – we had to hide a lot of the information.</p>	MSE-55	<p>Ongoing</p>
21	We want to keep inspkey on Inspection screen	<p>We will keep it.</p>	MSE-56	<p>In Progress</p> <p>Being addressed by the Database TAG.</p>
19	AASHTO to host TAG and TRT members at the User Group Meetings		MSE-58	<p>Complete</p> <p>Inclusion of additional TAG and TRT members will be reviewed on a case-by-case basis.</p>
19	64-bit rewrite	<p>The Task Force has discussed this with Bentley and we are looking into the different scenarios. We’re not sure yet, but are looking at a separate 5.2.1 SP3 release that will be 64-bit.</p>	MSE-57, BRM-402	<p>Complete</p>
17	AASHTO BRIDGEWare website needs to be kept up to date	<p>Someone checked and it said “Coming soon, v. 5.1.3”</p>	MSE-51	<p>Complete</p>
16	Need to include SHV Load Ratings now	<p>SHV = Special Hauling Vehicles Federally required.</p> <p>This is basically just another vehicle field. What do you want? We can look into adding some fields to capture some SHVs. There may be some additional items later that will go along with that.</p>	MSE-100	<p>In Progress</p> <p>Will be implemented as part of the BrM 5.2.2 release.</p>

13	Better Oracle support	<p>It seems as though the system is being worked in SQL server and then being checked against Oracle. It seems as though that an Oracle DB is more problematic than SQL. Since 2/3 of the users are using Oracle, this should be better supported.</p> <p>Oracle creates an ODBC driver because they have to. If you do the same database in Oracle and SQL, Oracle is definitely slower. In 5.2.2 we'll be abandoning the reliance on ODBC drivers.</p> <p>Does Bentley have a full blown version of Oracle to test against?</p> <p>We're working internally to get a newer server to do more actual development. Moving forward ½ of the development will be in SQL and Oracle.</p> <p>Is it Oracle XE or full-blown Oracle?</p> <p>It's the full version.</p>	MSE-59	<p>Ongoing</p> <p>Bentley has focused its efforts on testing Oracle more aggressively.</p>
13	More stress testing	<p>25 user mins with reported results</p> <p>Lesson learned this year. Going forward this will be part of our testing.</p> <p>Is it automated stress testing or 25 users?</p> <p>Bentley to look into automated stress testing tools.</p>	MSE-60	<p>Ongoing</p> <p>Bentley is currently revising its automated testing strategy to better stress test the software.</p>
11	Change log – connected to JIRA issues (log of resolved issues)	<p>Whenever you come out with an update or a service pack include whatever is changed or fixed.</p> <p>We recognize this. The end goal is that projects will be related with every release. All of it will be traceable. 5.2.1 SP2 will be a little sloppy. 5.2.2 will be most of the way there. Moving forward it will be 100% traceable.</p>	MSE-62	Complete
11	Slow down on modeling and analysis project planning and focus on performance inspection	<p>This is a constant juggling act and we will continue to monitor and improve upon this whenever we can.</p>	MSE-61	Ongoing
8	Can we get Crystal Reports 2013 ASAP	<p>5.2.1 SP2 is a conversion to 2013. Request it from us and we'll send you the license key. Email <a href="mailto:BRM@Bentley.com">BRM@Bentley.com</a>. Eric to resend out his update.</p>	MSE-63	Complete
5	SharePoint hosted site for TAG		MSE-64	Complete
1	Auto name files during uploading for media files		MSE-65	Deferred
	Not every bug is an enhancement request	<p>Is there a procedure to have the Task Force analyze what is a bug v. what is an enhancement?</p> <p>We're seeking the approval to complete work. We don't draw the distinction between the two. The only difference are the bugs that are critically broken. If a bug should trump an enhancement every single time then we can do that.</p> <p>Example: Every form, when you make a change</p>	N/A	N/A

highlights itself in yellow except for when you get to the security page for reports. In my opinion, that is a bug, but it was changed to an enhancement request.

That is a bug.
